DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 8-10 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent 4,576,487 to Conover, Jr. et al [hereinafter Conover].

Conover discloses an interface comprising:

a microprocessor (246) for determining a modified resistive output for the temperature sensor; and

a means (250) for providing the modified resistive output in response to a signal from the processor;

wherein the microprocessor is programmed to execute a correlative algorithm; and the means for providing the modified resistive output is compatible with a monitor (252) such that the monitor can display a temperature that corresponds to the modified resistive output from a temperature probe (see figure 3; column 12, lines 5-39).

Allowable Subject Matter

3. Claims 16, 17, 19, 25, 27, 28, and 30-34 are allowed.

4. The Examiner's statement of reasons for allowance is presented in the Office action dated 5/20/05.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Claim 13 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record does not disclose or suggest the following in combination with the remaining limitations of the claims:

An interface for a monitor and a temperature probe including a temperature sensor, wherein the means for providing the modified resistive output includes an FET.

Response to Arguments

7. The indicated allowability of claim 8 is withdrawn upon further consideration of the Conover reference. Applicant's arguments with respect to claims 8-10 and 13 have been considered but are moot in view of the new ground(s) of rejection.
